# INTRODUCTION

## Purpose

The intent of this source list is to provide Incident Management Teams, Geographic Area Coordination Centers, and Forests access to the availability of helicopter resources on a state, geographical and national basis to conduct human extractions (hoist/short-haul) for emergency evacuations. Both insertion/extraction techniques are used to precisely place emergency response personnel and remove critically injured victims from normally inaccessible terrain or locations.

The goal is to provide emergency response to the seriously injured and to respond as quickly as possible to life threatening situations occurring on agency and interagency incidents. This document can also be useful when filling in information on the Interagency Mishap Response Guide & Checklist.

Emergency helicopter extraction resources identified in this document have been compiled from federal, state, municipal governments, military, and Emergency Medical Response (EMS) programs throughout the country. Many factors may determine the availability and response time of requested resources.

It is important for the user to recognize that identified sources and information may have changed due to unforeseen circumstances. Check ahead of time for availability of possible resources in your geographical area.

**Note:** If you find information that should be added, changed or is missing from the source list, please make corrections on the blank source list template in the appendix and send or email to:

## Definitions

**Rescue Hoist:** A cable winching device permanently mounted to the helicopter that is capable of lowering/raising persons attached to the cable.

**Short-haul:** To transport one or more persons suspended on a fixed line (150'-250') beneath a helicopter. The intent is to transport persons a short distance (short-haul), normally from a limited or inaccessible location to a safe landing area.

# ORDERING RESOURCES

Careful consideration should be given by the on-scene Incident Commander and/or EMS personnel prior to making the determination to request and initiate the use of the following resources.

An emergency helicopter request should be initiated and coordinated through the local dispatch or Geographical Area Coordination Center (GACC).

Request military, National Guard or Coast Guard resources through the Air Force Rescue Coordination Center (ARFCC), phone #: 800-851-3051. It is their job to locate the closest asset to fulfill your emergency rescue needs. It is important to note resource availability may be limited due to military deployments or other factors, and response time may be 2-3 hours.

In some circumstances, orders for county/sheriff department owned aircraft can be placed directly or with the specified contact.

# HELICOPTER SOURCE LOCATIONS

ERA Helicopters, through a teaming arrangement with Priority 1 Air Rescue Inc. (P1AR), now offers FAA-approved full-service Search and Rescue (SAR) and Emergency Medical Services capability and turnkey solutions to meet government needs.

Helicopters are stationed at Era Helicopters in Lake Charles LA. During the fire season and upon notice, the Priority 1 Air Rescue helicopter and aircrew can preposition to major fires or large incidents and provide dedicated 24/7 on-scene rescue and ALS medical support.

Crews and helicopters can be made available for the entire fire season. If needed, Era Helicopters and Priority 1 Air Rescue can also provide an additional rescue helicopter and air rescue/medical crew.

The following information was compiled by the Intermountain Healthcare Life Flight Program, Salt Lake City, UT and is intended to assist those involved in mission planning for an emergency extraction.

Their website states, "A hoist rescue is a great tool for extracting patients from challenging environments however this type of operation does have some limitations. Good communication between the requesting agency and Life Flight is critical in creating a plan to best serve all agencies and the patient safely."

For additional information go to their website:

<http://intermountainhealthcare.org/services/lifeflight/about/teams/Pages/hoist.aspx>

*Minor revisions have been incorporated into the information to fit the audience.*

### **Mission planning should begin with these types of questions:**

- What is the nature of the intended short-haul/hoist rescue?
- What is the weather at the scene?
- What do you want the rescuer to do?
- What is the plan if the rescuer cannot complete the mission?
- Patient information (i.e. location, mechanism of injury, condition, anyone with the patient, contact)
- Is there a Command Post (location, IC contact, radio frequencies)?
- Is SAR at the scene or deployed?
- Is there a landing area (near the patient, near the Command Post)?
- Where is the nearest location for jet fuel?
- Is there anything else you want us to do before we leave the area?

### **Factors That Limit Hoist Operations:**

- Winds are greater than 20 mph, poor visibility, or severe weather.
- If total weight of patient and equipment exceeds 450 lbs.
- Hoist operations are not conducted at night.
- Over water.

### **We may not be able to complete a short-haul/hoist mission if:**

- There are unresolved communications issues or safety problems.
- Near dusk.
- Patient location requires technical rescue.
- There's avalanche potential at patient location

**Initial Short-haul/Hoist Risk Assessment:**

- Life threatening injury or illness.
- Time dependent injury.
- Ground evacuation may endanger patient and/or other personnel.
- Ground evacuation would be time consuming.
- Ground evacuation is not possible.
- No landing area near the patient.

**TOMAS**

**Terrain:** (Alpine, forest, slope, snow, etc.) When possible, establish a nearby alternate landing area.

**Obstacles:** (Trees, cliffs, rock scree, loose debris, dust, wires, limited daylight, rotor wash, etc.)

**Method:** (net, bag, litter, harnesses, tag line, etc.) Logistics, type of insertion/extraction.

**Alternatives:** Standby and/or assist SAR with a ground rescue, land near victim.

**Safety:** Team reviews available information and identifies concerns. Determines “Go/No Go” decision and justifies why.
